

HARSHITH S

Java Developer

+91 9353169232 | harshithyadav662@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Java Developer with a strong foundation in Core Java, OOP, and Data Structures & Algorithms, currently expanding into full-stack frameworks. Experienced in SQL-based database work and REST API testing, with practical use of AI coding assistants (GitHub Copilot, Cursor, Claude) to write cleaner code, debug faster, and learn new concepts efficiently. Solved 400+ coding problems with consistent focus on problem-solving fundamentals.

SKILLS

Languages: Java, SQL

Core Java: OOP, Collections Framework, Exception Handling, Multithreading, JDBC

Frameworks: Spring MVC, Hibernate

Database: MySQL, PostgreSQL, Oracle

Web: HTML5, CSS3, REST APIs

Tools: Git, GitHub, Maven

EXPERIENCE

SDE Intern — Bluestock Fintech

May 2025 – June 2025

- Worked on backend logic in Java for an IPO tracking application, focusing on financial data processing and calculations.
- Wrote and optimized SQL queries for managing and retrieving IPO-related data from the database.
- Used AI coding assistants (GitHub Copilot, Claude) to speed up development, debug logic errors, and review code quality.
- Collaborated with the development team to improve application reliability and performance.

SDE Intern — TAP Academy

Jan 2026 – Present

- Solving real-world programming problems in Java with an emphasis on clean, efficient, and maintainable code.
- Working on database design and SQL query optimization to improve application performance.
- Leveraging AI tools (Cursor, ChatGPT) for rapid prototyping, debugging, and learning new concepts faster.
- Strengthening core software development practices through hands-on project work and code reviews.

PROJECTS

HiDrip — Fashion E-Commerce Platform

[GitHub](#)

Tech Stack: Java, JSP, Servlets, JDBC, MySQL, HTML5, CSS3, JavaScript, MVC, DAO Pattern

- Built a full-stack e-commerce application using Java Enterprise technologies with a structured MVC architecture and DAO pattern for maintainable database access.
- Implemented secure user authentication, product catalog with category filtering, shopping cart, and database-driven order workflows.
- Designed a normalized MySQL schema covering products, categories, users, carts, and orders.

Customer Churn Prediction

[GitHub](#)

Tech Stack: Python, SQL, Pandas, Scikit-Learn

- Explored a customer churn classification pipeline using AI-assisted development, analyzing usage and payment activity to flag at-risk subscribers.
- Practiced applying SQL and data-processing fundamentals to a real-world prediction problem outside of core Java work.

Smart AI Car Using AI and IoT

Tech Stack: Java (control logic), Raspberry Pi, Arduino, IoT Sensors

- Developed an autonomous smart car with AI-based obstacle detection and lane tracking, using Java for core control logic.
- Integrated real-time sensor data with decision-making logic for navigation and collision avoidance.
- Improved driving safety through automated obstacle avoidance and route correction.

ACHIEVEMENTS

- Solved 400+ coding problems on the TAP Academy TAI Platform, strengthening DSA and Java problem-solving proficiency.

EDUCATION

B.E. in Computer Science — Cambridge Institute of Technology North Campus

2022 – 2026

Bangalore, India | CGPA: 8.0
